Tiny House Canada

Main Purpose of the App:
- The app would help users build tiny homes from start to finish
- Get in contact with builders for every step of the process depending on the users location
- Also include images and videos if the user wants to do it themselves
- A lot search for vacant land
- Home Assistant suggested uses during each step of the process
- Suggest possible designs depending on disired square footage
- Open AirBNB app to stay in a tiny house

Hook for the Application:
- Provide some calculators on estimated energy uses and suggests number of solar panels depending on estimated usage

Settings
- Price per kilowatt-hour depending on location
- Desired Square foot changes prices
- Changing location will update the builder recommendations for each stage of building
